

Energy and its Forms
Choose Your Own Vocabulary Practice

Directions:

- Choose 15 words to define and make a vocabulary card for each.
- Your vocabulary list should have at least two words from each section.
- The words tend to get more difficult toward the bottom of each section.

⚠ We will use ALL the words on this list!

Section 1	Section 2	Section 3	Section 4	Section 5
mass weight speed velocity force acceleration friction displacement gravity inertia	energy mechanical energy potential energy kinetic energy thermal energy radiant energy chemical energy nuclear energy elastic potential gravitational potential	conduction convection radiation source destination convection current thermal energy transfer temperature vacuum conservation of energy	wave transverse wave longitudinal wave reflection absorption (light) diffraction diffusion frequency wavelength amplitude	spectrum EM wave ultraviolet infrared radio wave microwave x-ray gamma ray visible light color
