

Characteristics of Living Things

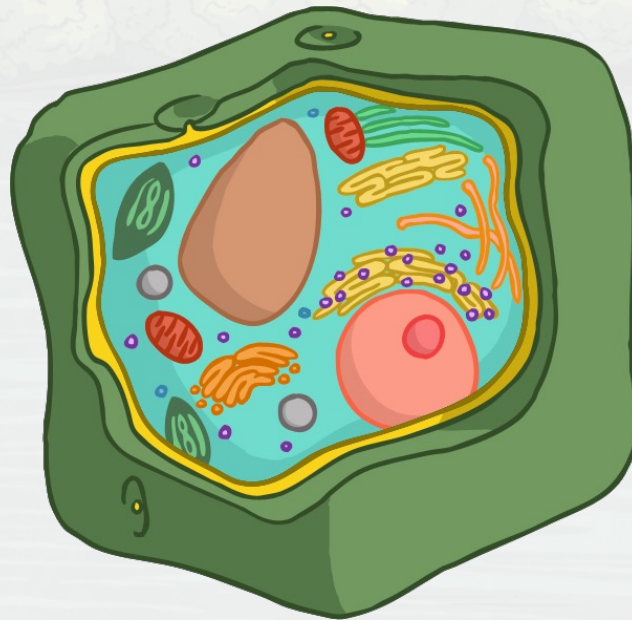

Living Things Are Organized

One of the first things that scientists look for is **structure**.

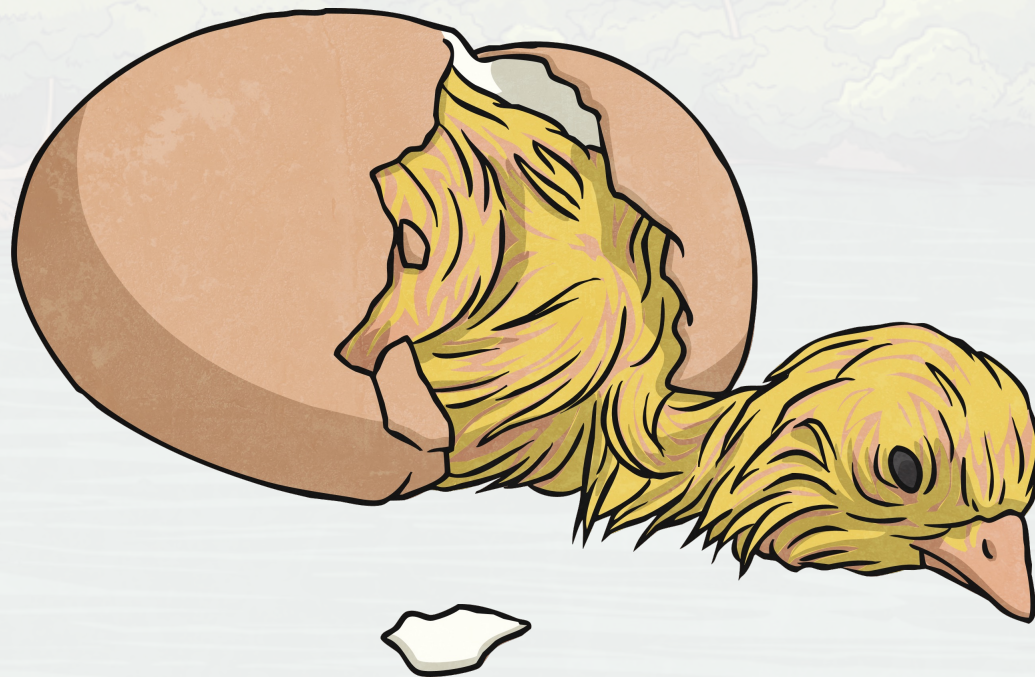

All living things show an orderly structure, or organization.

All living things are composed of one or more cells.

Living Things Make More Living Things

For life to continue, living things must **reproduce** to make more living things.

Living Things Change During Their Lives

Living things **grow** throughout their lives.

Living Things Adjust to Their Surroundings

Homeostasis: Living things **respond** to the environment.

How does your body respond to the environment when it is **hot**?

How does your body respond to the environment when it is **cold**?

Living Things Adapt and Evolve

Living things **adapt** to their environment so they have a better chance at survival.

Living Things Take in Nutrients and Excrete Waste

Living things need **energy** and **nutrients**.

After they use nutrients, they **excrete waste**.

Can you name the characteristics of living things?

Organized

Reproduces

Grows

Responds to Environment

Adapts over Time

Take in Nutrients

Excretes Waste
