

CHARACTERISTICS OF ANIMALS AND PLANTS

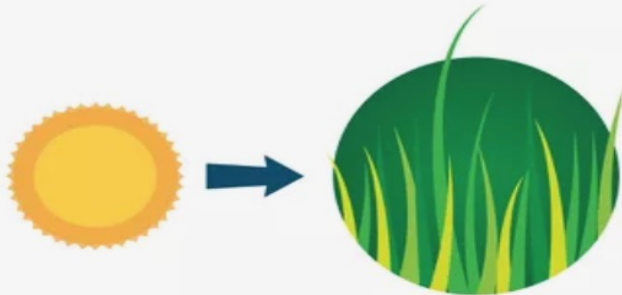

AUTOTROPH

VS

HETEROTROPH

PRODUCERS

Produce their own food for energy. Use Photosynthesis or Chemosynthesis

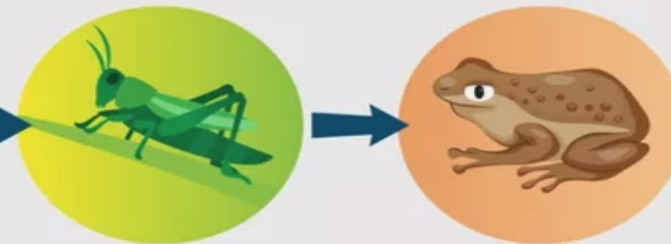

Sun

Grass
Photosynthesis

CONSUMERS

Eat other organisms to get proteins and energy

Grasshopper

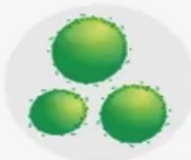

Toad

Plants

Some
bacteria

Algae

Animals

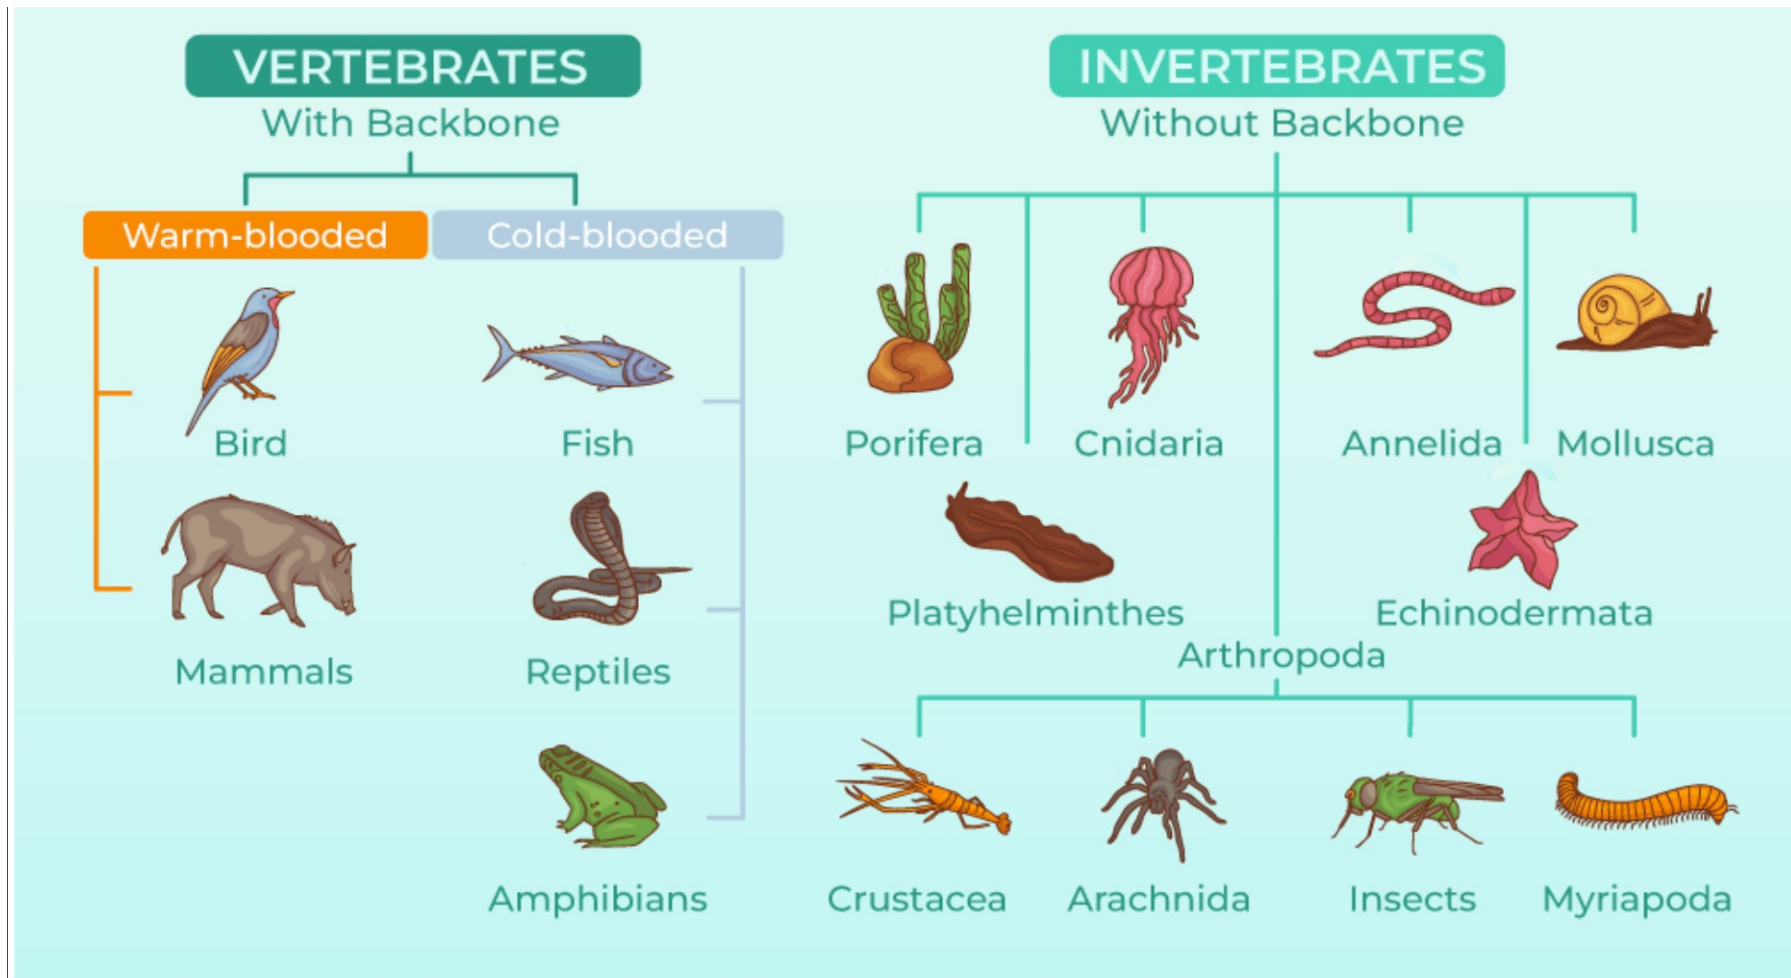

Most
bacteria

Fungi

What Characteristics Do They All Share?

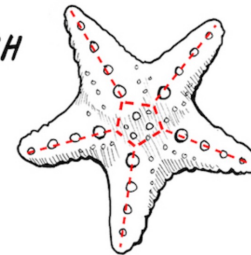

ALL ANIMALS...

- are eukaryotes
- are multicellular
- are heterotrophs
- do not have cell walls
- respond to the environment
- exchange gasses

NEARLY ALL ANIMALS...

- have sensory organs
- have a nervous system
- move around sometimes
- have internal digestion
- have centralized organs

STARFISH

*BRAIN = NO
NEURONS = YES
NERVE RING = YES*

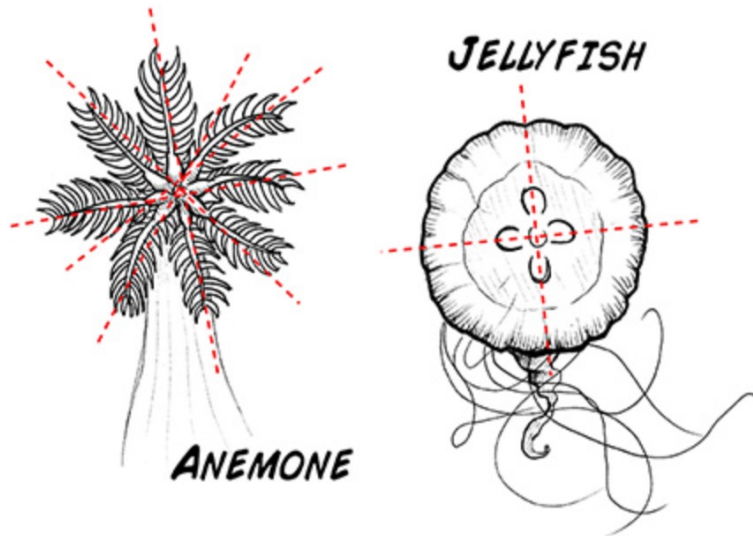

SPONGE

*BRAIN = NO
NEURONS = NO*

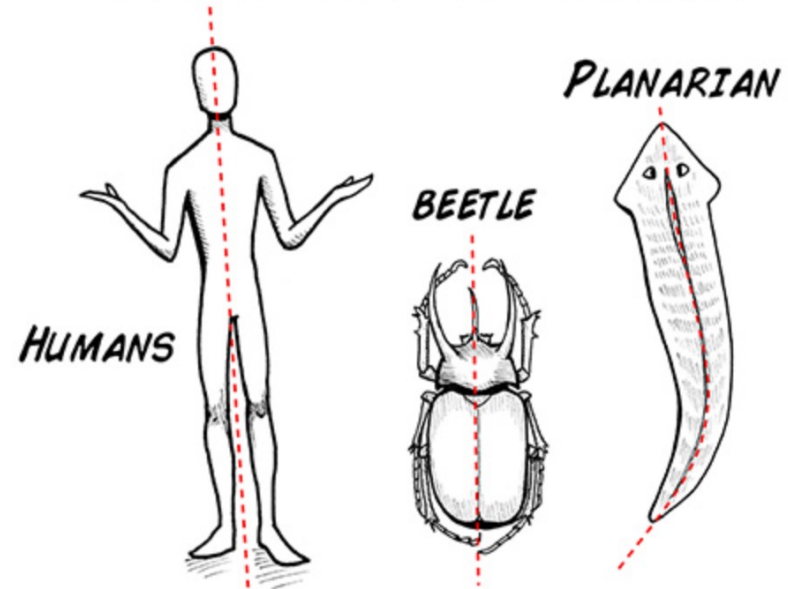

ANIMAL SYMMETRY

RADIAL SYMMETRY

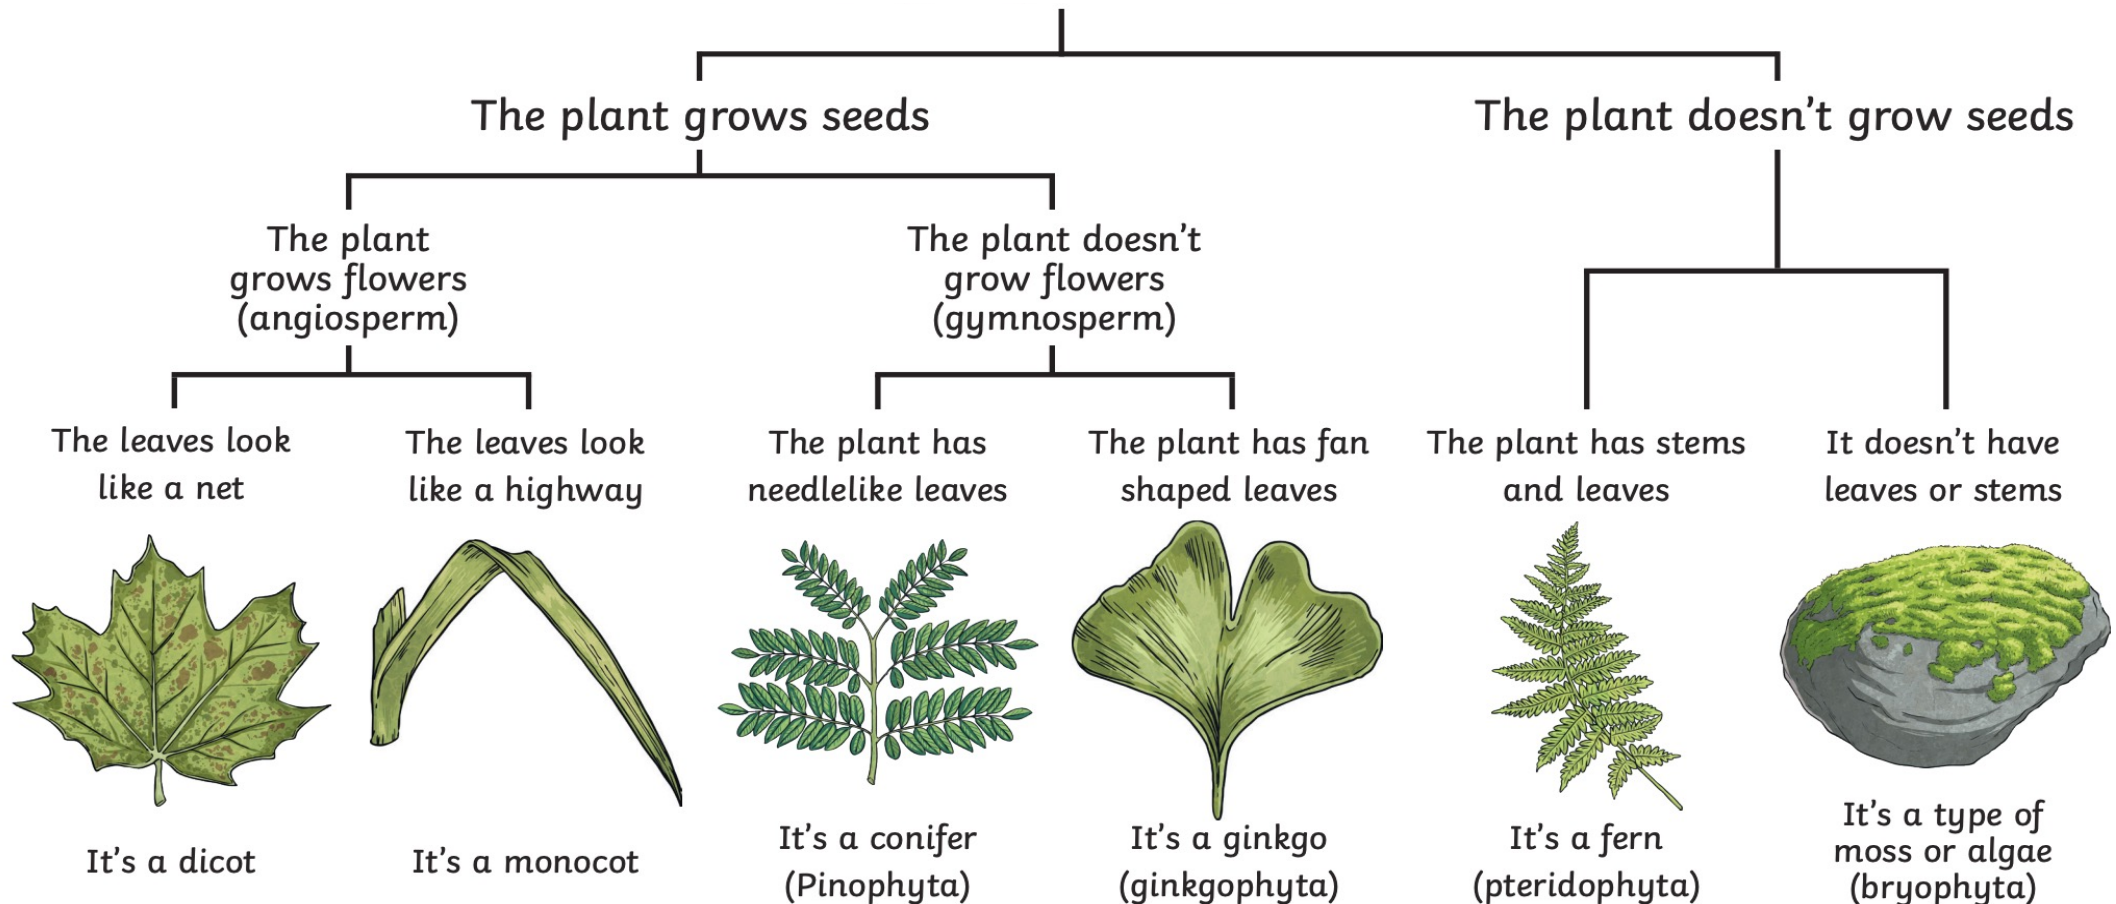

BRAIN = NO
NEURONS = YES

BILATERAL SYMMETRY

BRAIN = YES
NEURONS = YES

What Characteristics Do They All Share?

ALL PLANTS...

- are eukaryotes
- are multicellular
- have cellulose cell walls
- respond to the environment
- exchange gasses
- have chloroplasts

NEARLY ALL PLANTS...

- photosynthesize
- have roots or rhizomes

Monotropa does not photosynthesize.
