

Integumentary System

Tuesday, May 30, 2023

We Will Learn:

- Parts of the integumentary system
- Layers of the skin
- Structures of the dermis
- Different kinds of skin damage

The integumentary system

- covers the entire body
- includes:
 - nails
 - hair
 - skin

integumentary

Click for sound
adjective

in·teg·u·men·ta·ry | \in-,te-gyə-'men-t(ə-)rē  \

Definition

: of or relating to an enveloping or external layer or covering (as of skin, hair, scales, feathers, or cuticle) of an organism or one of its parts

// the *integumentary* system

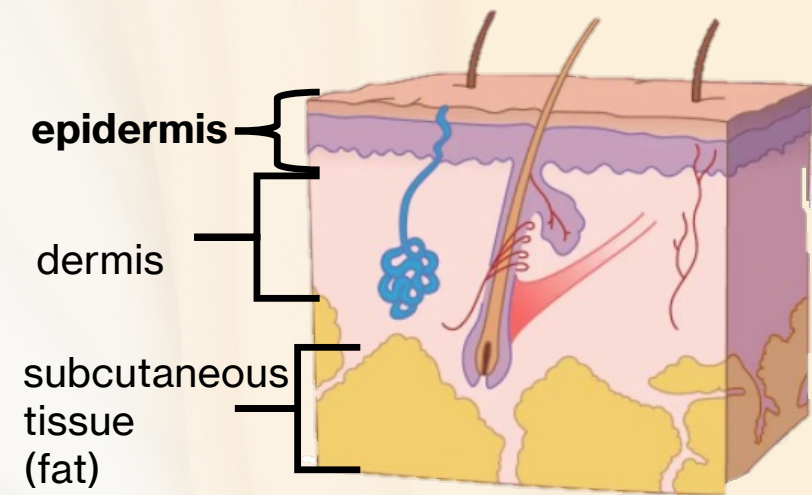

// Were there whiskers, filaments or other *integumentary* structures on the snout and elsewhere?

— Darren Naish

Layers of the skin

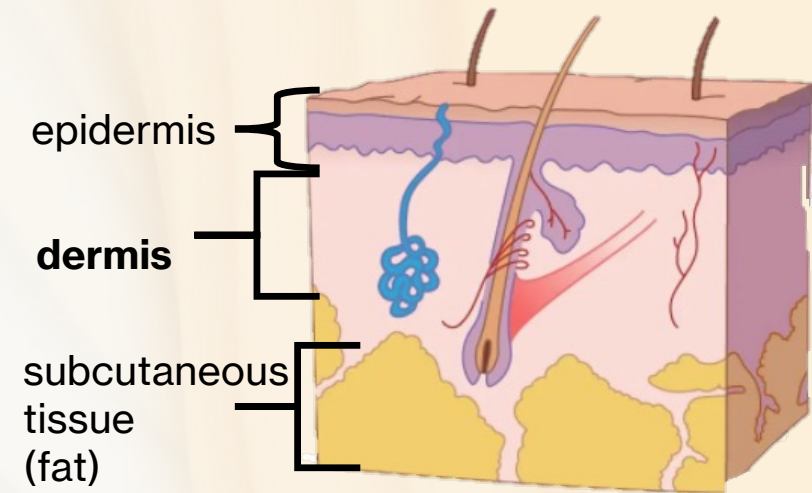

The skin is an organ made of many tissues

- The **Epidermis** is the outer layer of skin
- The epidermis is made of many thin layers of epithelial tissue
- The top layers of epidermis are dead cells filled with tough keratin protein

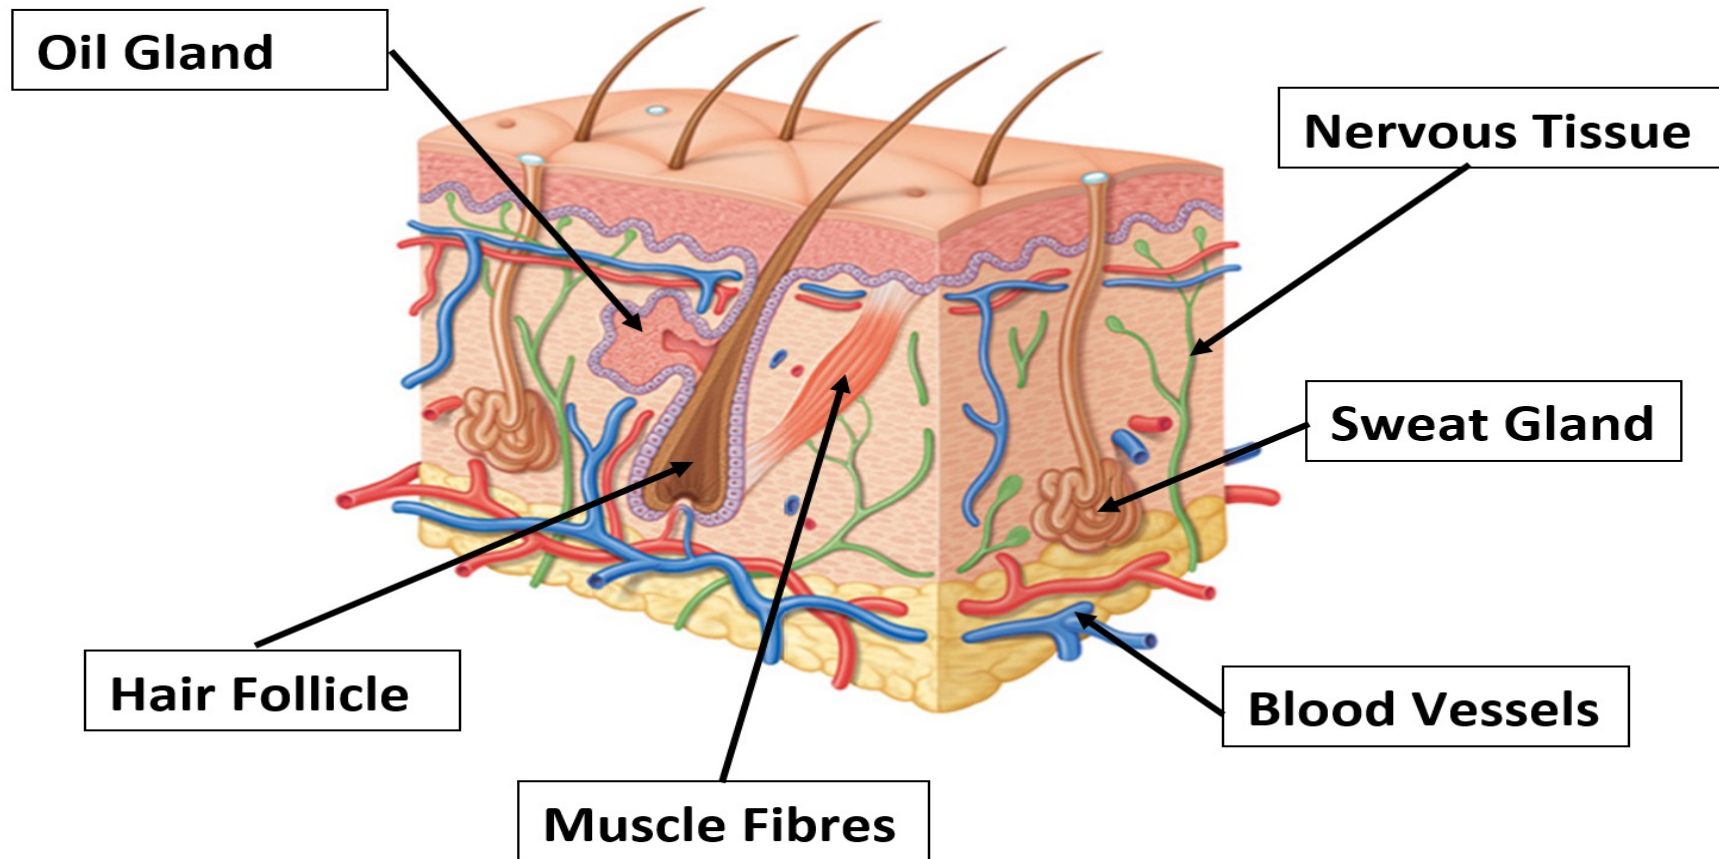

Layers of the skin

- The **Dermis** is the layer of skin beneath the epidermis
- The dermis is mostly made of connective tissue containing collagen
- **Collagen** – a strong and flexible protein gives strength to the skin

Structures in the dermis

Skin damage

Cuts – Skin is able to heal itself from most cuts and scrapes, but severe damage may result in scars made of collagen fiber

Sun Burn – Too much UV radiation can cause sun burn and over time, can lead to skin cancer.

Bruising– When small blood vessels near the skin break, we see a bruise that looks like a dark mark

HEALING

We Learned:

- Parts of the integumentary system
- Layers of the skin
- Structures of the dermis
- Different kinds of skin damage
