

Name: _____ Class: _____ Date: _____

Plant Journal

Each day, make detailed observations about a plant or part of a plant.

Day 1: Observe a plant anywhere you can find one.

Name or Description: _____

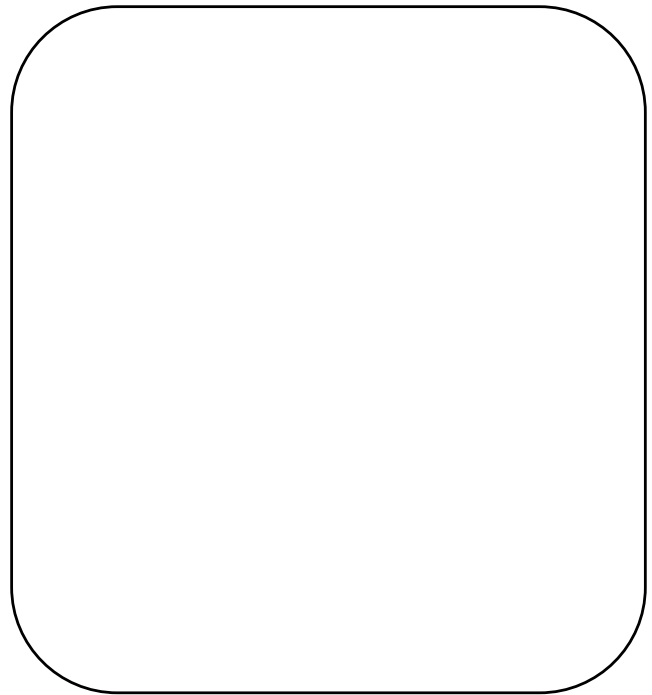

Where is it found? _____

Date observed: _____

Water, light and soil conditions:

Circle one: vascular / Non-vascular

How do you know? _____

Detail Drawing

What other organisms are on or near this plant?

Day 2: Observe a flower.

Name or description: _____

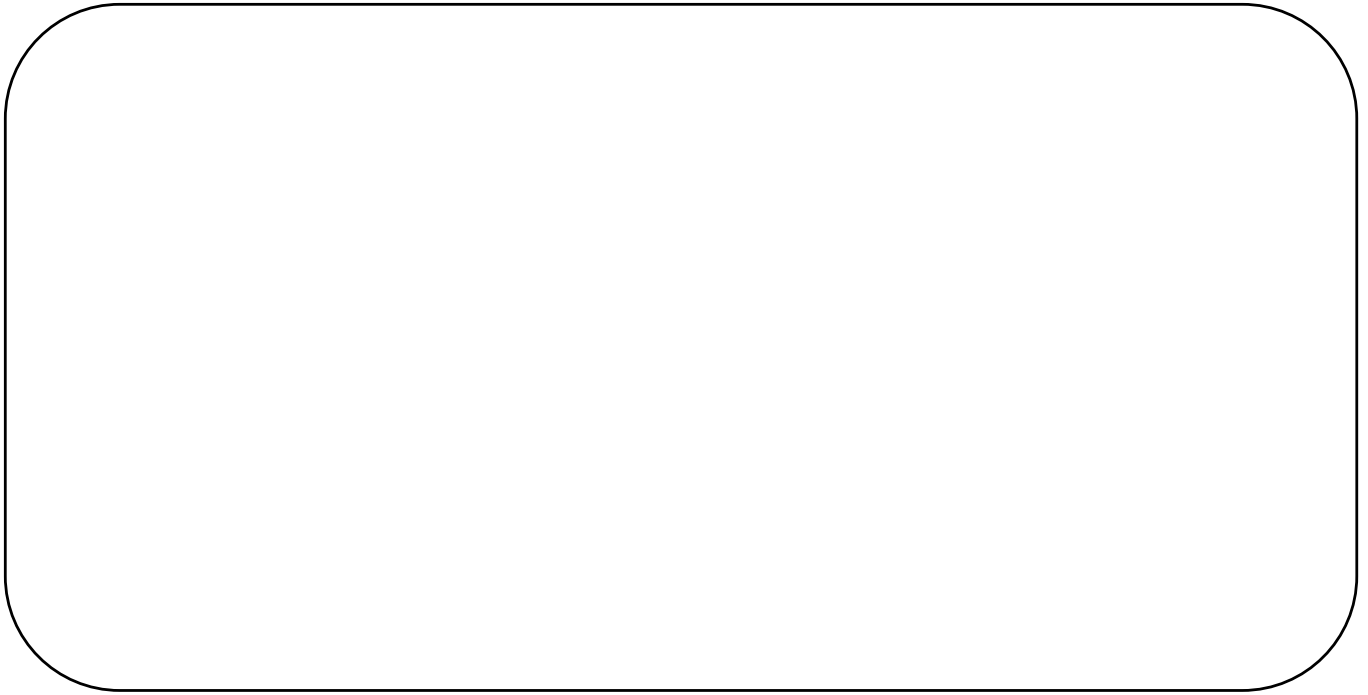

Where is it found? _____

What colors can you see? _____

Are there any other organisms near this flower? If so, what are they doing?

Are there more than one of these flowers nearby? If so, look to see if any are in a different stage of opening. What differences can you notice?

Day 2: Draw the flower you see. If there is more than one, show the different stages.

Day 3: Find a plant that you think looks weird or interesting. What is unique about it?

Describe the biotic and abiotic conditions that you can observe in the plant's environment. _____

Do you think this plant is in its natural environment? If so, what clues do you have?
If not, how do you think it came to be where it is?

How do you think this plant has adapted to its environment? What are some special traits that it has and how do they help it survive?
